

Twinsburg City Schools Twinsburg, Ohio

Enhancing Educational Opportunities for All Age Groups

Access from home to coursework & media content

“...we like the user-friendliness and the teacher-centric tools in MediaCAST.”

Twinsburg has a strong vision for technology in the schools, believing that “technology-integrated education promotes independence, success and lifelong learning.” With that in mind, students gain firsthand experience with technology early and often in the Twinsburg City School’s five schools. Using **MediaCAST’s Kiosk Central™** module, students in an Interactive Media class deliver campus-wide information. In combination with its’ emergency information service “we can webcast information about student activities or to what to do in case of an emergency.”

BUILDING MEDIA RICH COURSES

Twinsburg’s primary use of **MediaCAST** is to incorporate digital media files into their coursework development process. “We have been integrating digital curriculum for quite a few years and we like the user-friendliness and the teacher-centric tools in **MediaCAST.**” Because **MediaCAST** “tools are intuitive for teachers to use”, according to Jennifer Farthing, Twinsburg’s Library & Educational Technology Coordinator, “we have gone from providing lists of links, to interactions, to actual learning.”

“Great for building courses that incorporate PowerPoint™ files, United Streaming™ and the rest of our content library.”

Jennifer Farthing
Technology Coordinator

“Our work is to go beyond the occasional video and to incorporate United Streaming™ and the rest of our content library into the curriculum.”

Jennifer Farthing
Library & Ed Tech
Director
